

Write a program in Python, that can accept a paragraph string and page width as parameters and return an array of left AND right justified strings.

Note: No words should be broken

Submission Instructions:

- Steps to execute your program (README)
- A sample output
- Unit tests are a big plus

Example:

Sample input values:

Paragraph = "This is a sample text but a complicated problem to be solved, so we are adding more text to see that it actually works."

Page Width = 20

Output should look like this:

```
Array [1] = "This is a sample"
Array [2] = "text but a"
Array [3] = "complicated problem"
Array [4] = "to be solved, so we"
Array [5] = "are adding more text"
Array [6] = "to see that it"
Array [7] = "actually works."
```
